

DECALPRO[®]fx

Make REAL Dry Transfer Decals ... IN 5 MINUTES!

New Process!

...for making real, pressure-sensitive, dry transfer decals in **full color**, pure **white** or any of 12 **metallic** colors in 5 minutes from any color or B&W laser printer or photocopier. Make high quality transfers that rival expensive commercially made decals for a fraction of the cost.

THE IDEAL TEXT & GRAPHICS TOOL FOR ALL USES!

- No darkroom, negatives or special equipment needed
- Use with any COLOR or B&W laser printer or photostatic copier
- Extremely thin graphics and text are inherently scratch-resistant
- Transfers are fuel-proof... protective "clear coat" not required
- Can be over-sprayed for long term maximum scratch protection
- No permanent carrier left behind unlike all "water-slide" decals
- Out performs commercially made dry-transfers hands down
- Transfer outlines to balsa & hardwoods for easy scratch-building
- No drying or waiting time after application - handle immediately
- Open areas of the graphic remain open to the background
- Transfer to any surface; glass, cardboard, silk, metals & plastics
- No problem for round or even compound surfaces with any texture
- You can also etch and "chemically mill" brass & other metals
- Dedicated customer website for all new tips, tricks & techniques
- 30-Day money-back refund guarantee if not completely satisfied
