Rev 1.1

MESSAGE FROM THE CEO

To our valued customers,

Thank you for your interest in 4D Systems and the products we have to offer.

We are constantly looking for ways to improve our customer experience and it is hoped that a Product Brief such as this, can instil confidence in choosing 4D Systems as your supplier of superior embedded electronic products.

We invite you to showcase our latest release and thank you again for your continued support.

Atilla Aknar
Founder & CEO

1. Overview of the μ VGA-III

The μ VGA-III is an Intelligent VGA Graphics Engine packed with plenty of features, ready to become the GUI for your next target application. It is the perfect choice for many applications that require a front end smart graphics interface.

Embedded at the heart of the design is the **PICASO** Graphics Processor, which is driven by a highly optimised virtual core engine; EVE (Extensible Virtual Engine).

The μ VGA-III combines a display driver capable of 320x240 (QVGA), 640x480 (VGA) and 800x480 (WVGA) resolution output to a standard VGA display, micro-SD card connector, along with a group of general purpose input/output pins (GPIO's), including I2C and serial UART communications.

The μ VGA-III can be programmed in its native 4DGL language (similar to C), using the Workshop4 IDE software tool suite, or it can be configured as a serial slave device to use with your favourite host controller. The freedom is at your fingertips with this microVGA module.

2. Module Features

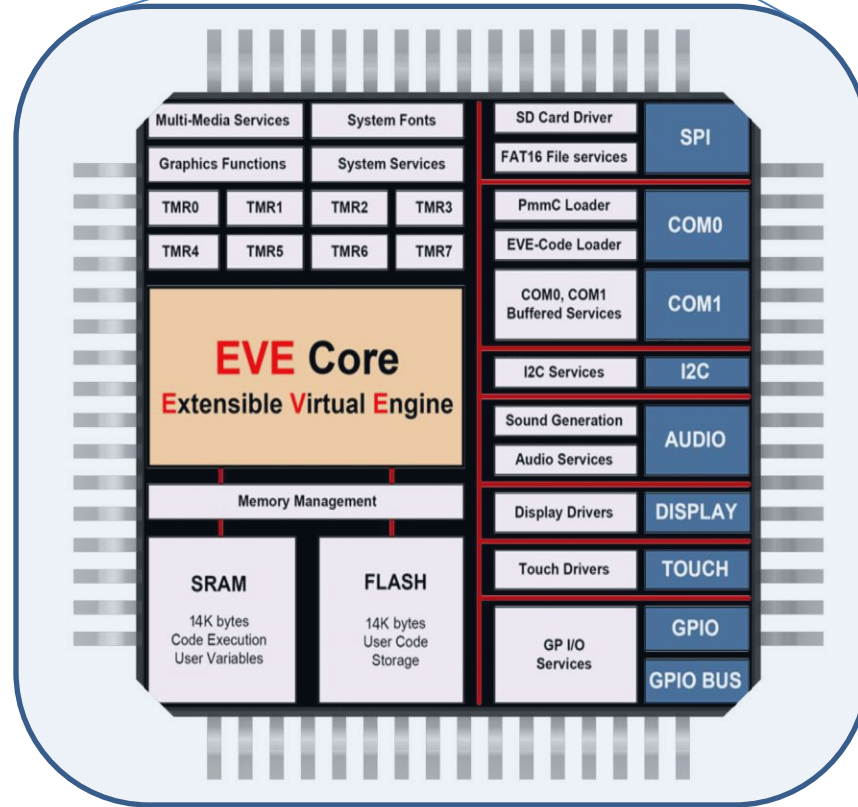

- 01 PICASO Graphics Processor
- 02 VGA Interface with cable included, with following resolutions supported:
 - 320 x 240
 - 640 x 480
 - 800 x 480
- 03 2 x 5 Pin Serial Programming Interface
- 04 2 x 15 pin Header for Expansion, on the rear
- 05 micro-SD Card Slot
- 06 Dedicated Line-Level PWM Audio Output
- 07 DOS compatible file access (FAT16)
- 08 Dual serial UART ports, RX0/TX0 and RX1/TX1
- 09 I²C Communication Bus
- 10 SPI Communication Bus for uSD Storage
- 11 13 General Purpose IO
- 12 8 x 16 bit timers with 1ms resolution
- 13 8 of the GPIOs useable in a parallel bus configuration
- 14 4 x Mounting Tabs with 3mm holes
- 15 Light Weight at only ~ **17gm**

3. PICASO Processor

The **PICASO** is a custom embedded graphics Processor designed to drive 16 bit 80-Series CPU Interface Display/VGA driver chips. Powerful graphics, text, image, animation and countless more features are built right inside the chip.

The **PICASO** offers a complete suite of features, crafted to be at the forefront of any product requiring colour, animation, images and sound. The **PICASO** is also powerful enough to control and communicate with peripheral devices over SPI, I²C or Serial Port.

4. VGA Interface

800 x 480 Resolution

640 x 480 Resolution

320 x 240 Resolution

The **μVGA-III** module can be interfaced with a VGA Monitor or a screen with VGA interface, supporting 320x240, 640x480 or 800x480 resolutions, to showcase the power and capabilities of the PICASO processor.

The **μVGA-III**, with **65K** True to Life colours, delivers an astounding plethora of colours perfect for animations, slideshows and a number of multimedia presentations through the VGA interface, which consists of R, G, B, Vsync, Hsync and Clock signals,.

5. micro-SD Card Slot

The μ VGA-III supports **micro-SD** memory cards via the on-board micro-SD connector. This provides the user with expandable memory space suitable for all multimedia file retrieval; such as images, animations and movie clips, as well as data logging applications.

Supports up to 2GB micro-SD as well as micro-SDHC memory cards starting from 4GB and above.

6. Audio

Audio playback support in the PICASO Processor enables the **μVGA-III** module to play audio WAV files stored in the micro-SD memory card. Audio is available at Line Levels through the expansion header.

A simple instruction enables the user to play/pause/stop audio files while continuing the execution of the users code, such as display updates, touch recognition, communications, etc. The audio system also allows real time pitch change of audio samples.

7. Powering Your Device

Powering the μ VGA-III is as simple as connecting to a PC via a 4D Programming Cable. Power can also be supplied by a regulated 5V DC source.

9. Development Environment

Workshop4 is a comprehensive software IDE tool suite that provides an integrated software development platform for all of the 4D family of processors and modules. The Workshop4 IDE supports four different **Development Environments** for the user, to cater for different requirements and skill level.

Designer: The Designer environment enables the user to write 4DGL code in its natural form to program the μ VGA-III.

ViSi: A visual programming experience, suitably called ViSi, enables drag-and-drop type placement of objects to assist with 4DGL code generation and allows the user to visualise how the display will look while being developed.

ViSi-Genie: An advanced environment called ViSi-Genie doesn't require any 4DGL coding at all, it is all done automatically for you. Simply lay the display out with the objects you want, set the events to drive them and the code is written for you automatically. ViSi-Genie provides the latest rapid development experience from 4D Systems.

Serial: A Serial environment is also provided to transform the μ VGA-III into a slave serial module, allowing the user to control the display from any host microcontroller or device with a serial port.

10. Getting Started

Getting started is as simple as connecting the 4D Programming Cable to the display module, and choosing your product and Development Environment in the 4D Workshop4 IDE.

4D Workshop4 IDE guides you through the relevant aid tools with adequate explanation to get your application up and running in no time.

Proprietary Information

The information contained in this document is the property of 4D Systems Pty. Ltd. and may be the subject of patents pending or granted, and must not be copied or disclosed without prior written permission.

4D Systems endeavours to ensure that the information in this document is correct and fairly stated but does not accept liability for any error or omission. The development of 4D Systems products and services is continuous and published information may not be up to date. It is important to check the current position with 4D Systems. 4D Systems reserves the right to modify, update or make changes to Specifications or written material without prior notice at any time.

All trademarks belong to their respective owners and are recognised and acknowledged.

Disclaimer of Warranties & Limitation of Liability

4D Systems makes no warranty, either express or implied with respect to any product, and specifically disclaims all other warranties, including, without limitation, warranties for merchantability, non-infringement and fitness for any particular purpose. Information contained in this publication regarding device applications and the like is provided only for your convenience and may be superseded by updates. It is your responsibility to ensure that your application meets with your specifications.

Images and graphics used throughout this document are for illustrative purposes only. All images and graphics used are possible to be displayed on the 4D Systems range of products, however the quality may vary.

In no event shall 4D Systems be liable to the buyer or to any third party for any indirect, incidental, special, consequential, punitive or exemplary damages (including without limitation lost profits, lost savings, or loss of business opportunity) arising out of or relating to any product or service provided or to be provided by 4D Systems, or the use or inability to use the same, even if 4D Systems has been advised of the possibility of such damages.

4D Systems products are not fault tolerant nor designed, manufactured or intended for use or resale as on line control equipment in hazardous environments requiring fail – safe performance, such as in the operation of nuclear facilities, aircraft navigation or communication systems, air traffic control, direct life support machines or weapons systems in which the failure of the product could lead directly to death, personal injury or severe physical or environmental damage ('High Risk Activities'). 4D Systems and its suppliers specifically disclaim any expressed or implied warranty of fitness for High Risk Activities.

Use of 4D Systems' products and devices in 'High Risk Activities' and in any other application is entirely at the buyer's risk, and the buyer agrees to defend, indemnify and hold harmless 4D Systems from any and all damages, claims, suits, or expenses resulting from such use. No licenses are conveyed, implicitly or otherwise, under any 4D Systems intellectual property rights.

For additional information on the μ VGA-III, please refer to the μ VGA-III Datasheet or visit 4D Systems website at www.4dsystems.com.au

If you require specific help with a 4D Systems product, information can be sourced from the FAQ and relevant forum threads on the website, or by contacting a direct member of our Tech Support team at 4D Systems at support@4dsystems.com.au
